

Rúben Marques

FULL STACK DEVELOPER

✉ rubenmarques86@gmail.com | 🌐 ruben-marques-dev

Summary

Experienced Full-Stack Developer with a strong focus on backend development, specializing in JavaScript and AWS cloud solutions. Passionate about designing scalable and efficient backend systems, I thrive in collaborative environments, building strong relationships with the team to drive product success. Dedicated to writing clean, maintainable code and mentoring junior developers. Seeking a role where I can contribute my expertise to building robust and high-performing applications.

- Proficient in JavaScript, developing both front-end and back-end solutions.
- Experience in AWS cloud using Terraform and Serverless Framework.
- Team player who prefers to work in a collaborative environment.
- Great self-manage handling quality and goals.

Work Experience

Critical Tech works

Porto, Portugal

since May 2021

- Maintain a Angular and NestJs application leveraging AWS infrastructure.
- Engage in proactive decision-making regarding product and architectural design.
- Lead and mentor a team regarding software developing and Scrum.
- Coordinate with other teams to implement interdependent features.

Ludus Cristaltec

Porto, Portugal

July 2017 - May 2021

- Develop applications for the gambling sector, ensuring compliance with market restrictions.
- Contribute to the product creation process, from planning and development to launch, to meet customer needs.
- Maintain multiple applications by resolving bugs and adding new features.
- Mentor newcomers on effective practices for Laravel and Vue.js.

Projects Description

Market Hierarchies Management

ANGULAR, NESTJS, RXJS

- Developed an Angular frontend application utilizing a declarative approach with RxJs.
- Managed market hierarchies to classify sales by various factors such as dealer, country, and sales channel.

Sales Reporting Tool

ANGULAR, NESTJS

- Developed an Angular application to enable sales reporting at country-level granularity.
- Provided reports on current sales and future forecasts.
- Deployed a NestJs backend to AWS Lambda for scalable serverless architecture.

Standardization Data Platform

ANGULAR, EXPRESS

- Enabled users to standardize data from various sources into master data.
- Fetched data from multiple sources with daily synchronization jobs to ensure up-to-date information.

Gaming service to integrate with third party online casinos

EXPRESS, VUEJS

- Design and development of a gambling service to be integrated with online casinos.
- Back office to manage users, games and transactions.

In-House Authentication Service

EXPRESS, VUEJS

- Development of an authentication and authorization system.
- Centralize user authentication based on OAuth 2.0 protocol.
- Development of a package so third parties could easily be integrated into the ecosystem

Education

Feup(Faculdade de Engenharia da Universidade do Porto)

Porto, Portugal

MASTER IN INFORMATICS AND COMPUTING ENGINEERING

Mar. 2020

Master thesis on machine learning studying artificial neural networks to forecast the sales of a big retail company. The implementation was done in Python using the Keras framework to create a time series predictive model.

Certification

Professional Scrum Master II

APRIL 2024

Professional Scrum Master I

DECEMBER 2023

AWS Certified Cloud Practitioner

SEPTEMBER 2023

AWS Certified Cloud Developer

SEPTEMBER 2024
